

ESS, TSL partner up

ESPN Star Sports has tasked UK-based TSL to provide a new transmission infrastructure that will allow it to add another 10 channels to its portfolio of 17.

Pre-built at TSL's facility in Maidenhead, the system is based on Omneon's MediaGrid content-storage system. Its core infrastructure includes a Quartz QMC master-control switcher, Miranda Multi Viewers and Crystal Vision modular interface equipment. The system will go on air for the first time this month.
