EXHIBITIONS & SHOWS : REGIONAL SHOWS & EVENTS

TSL At CABSAT

TSL has been involved in the rollout of new technology and workflows for many of broadcasters and facilities. The company is involved in a number of high profile systems projects in the region including a new HD studio and transmission facility for Al Watan in Kuwait, and two large HD OB production units for leading Arabic broadcaster ART.

TSL has a strong professional products division that includes audio monitoring, UMD and Tally systems. The company often develops solutions in-house to meet customer requirements that cannot be satisfied by existing third-party products.

At CABSAT 2007 TSL will be showcasing:

- * AMU HD range: This portfolio of comprehensive audio monitoring products has everything you need to migrate your existing SD audio and video monitoring to HD, including a built-in video monitoring quality enabling HD video signals, at any standard resolution, to be down-converted at monitoring quality and displayed on an external 4:3 SD or composite monitor.
- * AMU2 8HD range: Offers 8 channels of HD/SD embedded audio, Dolby E and Dolby Digital sources to be monitored all in one box to allow signals to be accurately monitored in a wide variety of systems applications.
- * Dolby and HD capable: Highlights include affordable Dolby E monitoring with the AMU2 Dolby unit. Multi-standard HD units also feature unique built in HDSDI video monitoring with an integral Aspect Ratio Converter (ARC) and down converter, which enables 16:9 HD video to be monitored on a 4:3 SD monitor.
