

## **AUDIO MONITOR**

### **TSL PAM2i-C**

Uses the features of TSL's PAM2-3G16 and adds external screen monitoring capability, IT network integration and advanced signal management functionality such as loudness logging, audio alarm reporting and third-party system control; forms part of an integrated facilitywide audio monitoring and management system collecting and collating signal data from ingest, master control, QC and any other critical element of the broadcast workflow.
