## IBC preview: Innovation goes on show

Some of the big guns may be missing, but this year's show still has plenty to offer in terms of the latest industry trends. Will Strauss provides highlights of who's exhibiting what.

UK firm TSL (10.B41) will be pushing its PAM2-3G16, a professional rack-mounted audio monitor. Jointly conceived and designed by Celtic Audio, its loudness levels are represented as a moving horizontal line superimposed across the bar graph display with an alphanumeric value shown on screen.

- **IBC takes place 10-15 September 2009 in Amsterdam**
- **With thanks to technology consultants Hugh Waters and MC Patel for their help with putting together this preview**
