

TSL introduces Intelligent MDU Portfolio

TSL has launched a new range of intelligent Mains Distribution Units (MDUs) for the broadcast community. The flagship MDU-12PM, the broadcast industry's first remote Power Management MDU is complimented by the mid-range MDU14-CO and entry-level MDU14-B. The MDU14-CO provides broadcasters with a Changeover 1RU MDU that automatically switches to a redundant power supply in the event of a power failure, providing 100 per cent power up time. Functionality includes:

- Built-in Overload Circuit Breaker
- 14 IEC outputs
- Total Load is 16 AMPs
- Warning LEDs
- Cable Tie Bar

The entry-level MDU14-B provides broadcast facilities of any size with a reliable 1RU system that features built in cable management.
