

TSL NAB2007 Preview

Stand No: SU14615

TSL is an independent broadcast systems integrator. The company has been involved in the design, integration and installation of new technology and workflows for broadcasters for over 20 years. TSL is currently working on a number of high profile broadcast technology projects worldwide including the NRK Programme Bank project in Norway, the ESS Home Run project in Singapore, and HD OBs for ART in Jordan. Other projects over the last 12 months include Siemens Broadcast Systems with BBC Scotland at the all new Pacific Quay project in Glasgow, UK, HD Studio and Playout facilities for Romanian broadcaster ProTV and a new playout centre for Setanta Sports in West London.

TSL also has a professional products division that designs and manufactures the latest in audio monitoring, and the TallyMan UMD and Tally system.

At NAB2007 TSL will be showing:

US Debut - AMU2 8HD Dolby: The latest version of TSL's flagship audio monitoring solution that provides a future proof multi-functional solution for HD/SDI master control, playout, production and outside broadcast monitoring requirements. The AMU2-8HD is HD, and fully Dolby E and D compatible and has a host of features that makes it one of the most useful and easy to use, multi-format audio monitoring products available.

US Debut - In-Monitor-Display (IMD): This system allows dynamic UMD information and dual tallies to be displayed directly in-picture on flat screen monitors. The system is designed as a fully integrated addition to the well established TallyMan system to give a new monitoring option positioned between multiviewers and traditional Under Monitor Displays. A TallyMan system can run multiviewers, conventional UMDs and the new IMDs side by side in the same system as required. Designed to work with both 4:3 and 16:9 sources and displays, the system offers a variety of display modes that allow the UMD and tallies to be displayed in-picture or below the picture as required. The IMD system is modular and offers both dual channel composite and dual channel SDI connectivity in each module with up to 16 modules equivalent to 32 channels of IMD in a 3RU rack.

US Debut - New additions to the TallyMan UMD and Tally studio control system: The latest TM1 and TM2 system controllers, the heart of a Tallyman solution, run the TallyMan program as an embedded Windows application allowing real-time control of the system. TallyMan systems are available from low cost entry-level systems with everything in one box right up to large scale systems with several controllers and associated peripherals networked together. Additions to the range include the ESP-1R system expander, which extends the serial and parallel connections.

Also on show:

AMU1-BHD

The AMU1-BHD compact audio monitoring solution is ideal for desk mounting or where rack space is at a premium. The AMU1 features an auto sensing HD/SDI video input, 2 x balanced AES/EBU and 4 stereo analogue inputs. The unit also offers dual high-resolution 106-segment tri-colour bargraphs and a powerful integrated amplifier: everything you need in a 1 rack unit.

AMU1-CHD

The AMU1-CHD offers a high-quality compact audio monitoring solution with active internal loudspeakers, HD/SDI embedded audio monitoring and clear 26 segment bargraph displays. This flexible and cost effective unit is ideal for studio racks and mobile applications.
