

Integrator TSL presents products

Perhaps better known for its expertise as a systems integrator TSL also has a thriving products division which markets a host of audio monitoring, UMD and Tally systems.

Its recent developments include an audio video monitor capable of decoding all standards up to and including 1080p 60, 59.94 and 50Hz. The new 3Gbps V Series monitor (AVMU2-3G) features precision HD/SDI audio metering with an integrated 4.5-inch, 16.9 LCD screen.

Its well-established 8-channel HD/SDI and Dolby decoding rack audio monitor has been updated to 3Gbps and now decodes all standards including 1080p 60, 59.94 and 50Hz. The AMU-8HD-3G is intended to provide a complete HD monitoring solution for master control rooms, playout, production and outside broadcast installations.

Four rack mount confidence monitors will be available with passive, active, analogue and AES digital options as well as new power management mains distribution units (MDU series). These units comprise; a Power Manager for intelligent power distribution with Ethernet SNMP alarms, e-mail alerts and latching relays for remote power control and sequential operation; a Power Alert; Power Change Over for dual input auto changeover and 14 way fused outlets; and Power Standard for reliable 14 way mains distribution.
