T-MIX touch is a 'first'

TSL's AVM-T-MIX is billed as the world's first rackmount touchscreen-controlled audio mixer/monitor

TSL Prof Products Group

Two new products from TSL Professional Products Group are on demonstration. Latest developments include the AVM-T-MIX, described as the world's first rackmount touchscreen-controlled audio mixer/monitor.

The AVM-T-MIX delivers a combination of audio monitoring and channel mixing, designed to simplify operations and workflow throughout the TV broadcast environment. In live operation, the user can instantly see channel activity, recognise the source that has been named via the keyboard menu, and listen to the audio from individual, grouped or mixed channels.

Surround sound audio can be down-mixed instantly at the touch of a button for compliance checking, confidence monitoring and multiple language, or international mixes defined in seconds for instant recall.

The PAM1-3G16 1RU multichannel audio monitoring unit comes with a full 16-bar graph display and many of the advanced features included on the PAM2-3G16, such as loudness measurement, preset standard switching and advance monitoring mode selection. 10.B41
