(13/01/2012) TSL attends BVE London following major successes in 2011, including completion of some of the largest and most complex projects in the UK, Middle East and beyond.

Exhibiting on stand H26 and celebrating its 25th anniversary, TSL is prompting BVE visitors to ask its team of experts why so many premier broadcasters and facilities trust them to continuously deliver their most significant commercial projects and support services.

Having recently completed such high-profile projects as Phases 1 and 2 of the broadcast infrastructure at MediaCityUK, TVNZ's new file-based workflow and media asset management system, as well as multiple fibre-based HD studios at the University of Salford, TSL has significantly broadened the scope of its services and expanded the size and complexity of the solutions it delivers.

With a reputation for forward-thinking and independent values, combined with a continued drive to address and resolve the challenges that today's growing file-based/IP-centric projects command, TSL is able to provide the most comprehensive, cost-effective systems integration capability available today.
