

TSL Shows Multiformat Audio Monitor

England's TSL, a manufacturer of audio and video monitors, tally systems, etc, is showcasing the PAM2-3G16, a

multistandard, multiformat audio monitor.

Developed with partner Celtic Audio, the PAM2-3G16 is designed to simplify multichannel audio monitoring through the use of preset menus and shortcut keys. An OLED meter measures up to 7.1 surround sound while a video screen provides video confidence monitoring. Dual powered speakers are on each end of the rackmountable 2 RU box.

Bargraph scales include VU, extended VU, BBC PPM, EBU PPM, EBU Digital, Nordic and DIN. Digital video is autosensed. Up to four groups/16 channels can be de-embedded. ITU BS1770/71 loudness is used.

TSL's MDU12-PMi is being exhibited as well, offering an energy management solution gives users control over and visibility of equipment racks. A feature of the system is the remote Ethernet control and monitoring of 12 individually switched IEC outputs via secure Web browser with SNMP and e-mail alarms for fuse fail, power fail, over/undercurrent alarm, input voltage, and power measurement in collaboration with 16 GPI inputs.
