

TSL Introduces PAM2-3G16 Audio/Video Monitor

A number of TSL products will make their world début at IBC 2009 on Stand 10.B41.

Chief among them is the PAM2-3G16, a multi-standard, multi-format precision audio/video monitor that simplifies Dolby E/D or discreet multichannel audio monitoring using preset menus and shortcut keys for rapid access to critical elements of complex broadcast audio systems.

The PAM2-3G16 has a total of 10 buttons that can access menus and recall/manage user presets. Sixteen bar graphs enable users to view four groups of embedded audio or eight AES pairs at a glance; and the widescreen video confidence display is of a quality synonymous with OLED technology.

The ability to intelligently dissect and monitor any multichannel audio signal structure from mixed mono to 5.1, make PAM2-3G16 the most advanced and intuitive product in its sector.
