

TSL will launch the PAM2i-C, which adds external screen monitoring capability, IT network integration and advanced signal management functionality to the features of its PAM2-3G16. PAM1-3G16, which includes many of the features of the PAM2-3G16, will also make its world debut. The latest software release for PAM2-3G16—free to users—adds key features such as an aux input mixer, a split mono scroll mode and improved access to monitoring functions.
