

Champions League audio with TSL PAM

Audio Monitoring

By Andy Stout

TSL Professional Product Group's PAM2-3G16 audio monitor has been selected by GlobeCast for use in the worldwide distribution of the UEFA Champions League football tournament in HD. GlobeCast Master Control Room Manager Jonathan Morley said, "We tried out a variety of audio monitoring solutions and the PAM2-3G16 is by far the most sleek, intuitive and comprehensive model on the market.

"It allows quick and dynamic control in a multi-channel environment. The PAM2 has proven extremely fluid under pressure when switching frequently between different audio standards in a live broadcast situation."

The multi-format PAM2-3G16 simplifies monitoring of multichannel audio using preset menus and shortcut keys for rapid and intuitive access to critical elements of complex broadcast audio systems. The PAM2-3G16 also includes Dolby Digital Plus as well as much-anticipated ITU-R BS.1770 loudness measurement capabilities. The PAM2-3G16 will feature on TSL's stand at IBC 2010 in Amsterdam.
